Abstract

This paper examines the transformation and gradual social collapse of Bengali society under British colonial rule between 1757 and 1947. It argues that colonialism operated not only as a system of political domination but also as a mechanism of economic extraction that fundamentally reshaped agrarian structures, social relations, and cultural life. Drawing on the works of Dutt[1] and Sen[2], the study highlights how policies such as the Permanent Settlement of 1793 and colonial trade practices generated structural inequality, rural distress, and institutional breakdown.

Furthermore, the paper engages with Guha's analysis of peasant resistance[3] and Bose and Jalal's broader interpretation of colonial economic transformation[4] to demonstrate how these processes affected different social groups. Through key historical events such as the Battle of Plassey (1757) and the Bengal Famine of 1943, the study shows that colonial economic policies disrupted traditional systems of production and distribution, ultimately weakening the social fabric of Bengal.

The paper concludes that colonial exploitation produced long-term socio-economic consequences that extended beyond the colonial period and continue to influence the region's structural inequalities.

Introduction

The history of Bengal under British colonial rule represents a deep structural transformation shaped by economic exploitation and administrative restructuring. Following the Battle of Plassey in 1757, the British East India Company established control over Bengal and gradually converted it into a center of revenue extraction (Chandra, 1989).

Before colonial rule, Bengal maintained a relatively stable agrarian economy supported by local governance systems and community-based institutions. However, colonial policies disrupted these foundations by introducing rigid land revenue systems, market dependency, and unequal power relations (Dutt, 1902).

This paper argues that colonial economic practices did not merely extract wealth but fundamentally transformed Bengali society by producing inequality, weakening traditional institutions, and creating conditions for long-term social collapse.

Literature Review

Scholars have examined colonial Bengal through different analytical lenses, highlighting economic, social, and political dimensions.

Dutt (1902) argues that British colonial rule led to a systematic "drain of wealth," where surplus was extracted from India without reinvestment, resulting in economic decline. Sen (1981) provides a different perspective by analyzing famines, particularly the Bengal Famine of 1943, as failures of entitlement and distribution rather than mere food shortages.

Guha (1963) introduces a subaltern perspective, emphasizing peasant resistance and the role of marginalized groups in shaping colonial history. Bose and Jalal (2011) situate Bengal within a broader South Asian context, showing how colonial economic integration led to uneven development.

Additionally, Davis (2001) and Greenough (1982) demonstrate how colonial policies intensified famine conditions and exposed administrative failures.

Tauger (2003) offers a critical re-evaluation of the Bengal Famine by questioning the dominance of entitlement-based explanations. While Sen (1981) emphasizes distribution failure, Tauger argues that actual food shortages and wartime disruptions also contributed significantly. This perspective highlights the complexity of famine causation and suggests that multiple structural and environmental factors must be considered together in understanding colonial crises.

Together, these studies suggest that colonialism operated as a structural force that reshaped economic systems, social hierarchies, and everyday life.

Methodology

A qualitative historical approach with thematic analysis of key sources.

1. Foundation of Colonial Rule (1757–1793)

2. Agrarian Control (1793–1857)

3. Economic Exploitation (1857–1905)

4. Crisis and Collapse (1905–1947)

This study adopts a qualitative historical methodology to analyze the relationship between colonial economic policies and social transformation in Bengal.

A purposive selection of secondary sources was undertaken, focusing on established scholarly works in economic history, famine studies, and colonial governance. These sources were chosen for their academic credibility and relevance to the research problem.

The study applies thematic analysis to identify recurring patterns across the literature. Key themes such as agrarian restructuring, economic extraction, deindustrialization, famine, and social inequality were used to organize the discussion.

Rather than relying solely on quantitative data, this research uses an interpretive approach to examine how colonial policies affected lived experiences, social relations, and institutional structures. This approach allows for a deeper understanding of long-term social change beyond numerical indicators.

Findings

1. Agrarian Collapse and Peasant Exploitation

The Permanent Settlement of 1793 fundamentally transformed Bengal's agrarian structure. By fixing high revenue demands, the colonial state shifted economic pressure onto zamindars, who in turn extracted excessive rents from peasants (Dutt, 1902).

This disrupted traditional agrarian relations and created a system driven by profit rather than social stability. Peasants experienced:

- Land dispossession due to inability to meet rent demands
- Chronic indebtedness to moneylenders
- Loss of customary land rights

Over time, these conditions weakened village cohesion and created long-term rural distress. Agrarian instability became structural, not temporary, contributing significantly to social breakdown.

2. Forced Cultivation and the Indigo Revolt

The Indigo Revolt (1859–60) demonstrates the coercive nature of colonial economic practices. Peasants were forced into indigo cultivation through exploitative contracts and violence, limiting their ability to grow food crops (Guha, 1963).

This system reduced agricultural autonomy and deepened economic insecurity. The revolt itself reflects organized resistance against colonial exploitation.

---

3. Deindustrialization and Economic Decline

Colonial trade policies led to the systematic decline of Bengal's traditional industries, particularly textiles. British manufactured goods entered Indian markets at lower prices, making local industries uncompetitive (Bose & Jalal, 2011).

At the same time, colonial policies discouraged industrial development within India and prioritized raw material export. This resulted in:

- Loss of employment among artisans
- Decline of skilled craftsmanship
- Growth of urban poverty

Deindustrialization was not accidental. It was structurally linked to colonial economic priorities that favored British industrial growth while undermining local production systems. This transformed Bengal into a dependent economy.

4. Famine and Human Catastrophe

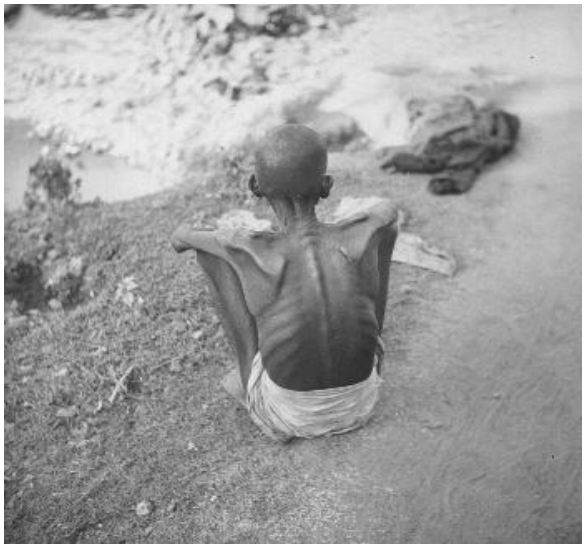

Figure 1. People waiting for food relief during the Bengal Famine of 1943, reflecting scarcity and administrative failure.
Figure 2. A famine victim illustrating the human impact of economic deprivation.

The Bengal Famine of 1943 represents the peak of social collapse. Sen (1981) argues that the famine resulted from entitlement failure rather than absolute shortage of food. Davis (2001) further shows that colonial policies and wartime priorities intensified the crisis.

Despite the availability of food, millions died due to lack of access, highlighting the collapse of social protection systems and governance (Greenough, 1982).

5. Economic Drain and Structural Inequality

Colonial rule transformed Bengal into a resource base for Britain. Dutt (1902) describes this as a "drain of wealth," where economic surplus was continuously extracted without reinvestment.

This process created long-term structural inequality. Wealth accumulation occurred outside Bengal, while local economies weakened. As a result:

- Economic development remained limited
- Class divisions widened
- Institutional capacity remained weak

These inequalities persisted beyond colonial rule, shaping the region's long-term socio-economic conditions.

Discussion

The findings indicate that the social collapse of Bengal was the result of interconnected economic and institutional processes rather than isolated events. Agrarian restructuring, industrial decline, and economic extraction reinforced each other, creating a cycle of poverty and instability.

Economic exploitation weakened social structures, while cultural and political changes further reshaped identities and institutions. Although colonial rule introduced certain modern systems, these changes were uneven and often served colonial interests rather than local development.

These historical patterns of inequality and economic dependency did not end with colonial rule but continued to shape post-colonial development in the region. Many of the structural weaknesses created during this period, including uneven land distribution, rural poverty, and weak institutional capacity, remain visible in contemporary Bangladesh. This continuity suggests that colonial economic policies had lasting effects that extended beyond immediate exploitation, influencing long-term development trajectories and social inequality.

Conclusion

This study demonstrates that colonialism in Bengal functioned as a system of structural transformation driven by economic priorities. By reshaping land relations, undermining local industries, and prioritizing extraction, colonial policies produced long-term social and economic consequences.

The resulting inequality, institutional weakness, and recurring crises were not temporary disruptions but enduring outcomes of colonial governance. Understanding these historical processes provides critical insight into the foundations of modern socio-economic challenges in Bangladesh and South Asia.
