From Burnout to Belonging

A Psychological Lens on *Christopher Robin*

Mental Health in the Hundred Acre Wood

INTRODUCTION

Uncovering Mental Health in the Hundred Acre Wood

Christopher Robin (2018) reintroduces beloved characters through the lens of adult emotional struggle. While whimsical on the surface, each character mirrors psychological traits or disorders seen in real life. This presentation examines the mental health themes embodied by key characters to build awareness and empathy through storytelling.
Disorders analyzed include Schizophrenia, ADD, Anxiety, ADHD, and OCPD traits.

Christopher Robin

– *Schizophrenia (Symbolic Interpretation),* Major Depressive Disorder & Burnout

Christopher shows signs of **Major Depressive Disorder (MDD)**
Cause: Persistent sadness, emotional flatness, loss of interest in joyful activities (anhedonia), irritability, and detachment from loved ones.
He also suffers from **occupational burnout**
Cause : Chronic workplace stress, emotional exhaustion, and lack of personal accomplishment.

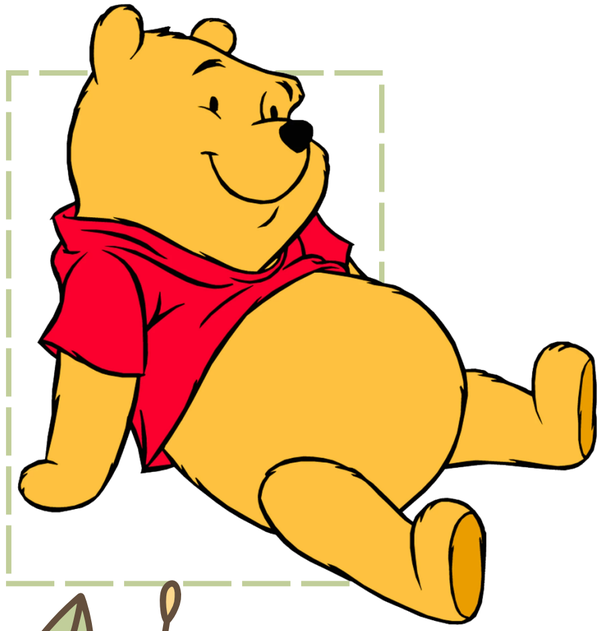
His healing begins when he reconnects with his childhood and begins to feel joy and connection again.

When his behavior starts to symbolically reflect **Schizophrenia**

Symptoms: Delusions or hallucination
Disorganized thinking
Social withdrawal

Winnie the Pooh

– Binge Eating Disorder



Characteristics :

Constant preoccupation with honey
Frequent overeating episodes
Eating for emotional comfort
Lack of control during eating
Symbolic of emotional dysregulation

He symbolizes a gentle, distracted mind—underscoring how attentional difficulties can be overlooked due to a quiet or passive temperament.

Piglet

– Generalized Anxiety Disorder (GAD)

- Excessive worry over minor or hypothetical threats.
- Avoids confrontation and frequently experiences panic-like physical symptoms.
- Consistently underestimates his own capabilities and relies heavily on reassurance.

Piglet's experience reveals how anxiety can distort self-perception and limit action, even in supportive environments.

Tigger

– Attention-Deficit/Hyperactivity Disorder (ADHD)

- High energy, impulsive behavior, interrupting, and constant activity.
- Difficulty with boundaries, listening, or waiting for his turn.
- While playful and fun, Tigger's behavior often overwhelms others and leads to unintended consequences.

Tigger highlights how untreated ADHD can lead to social challenges but also creativity and enthusiasm when embraced.

Rabbit

– Obsessive-Compulsive Personality Disorder (OCPD) Traits

- Excessive need for order, control, and perfectionism.
- Becomes distressed when routines are disrupted or plans change.
- Prioritizes rules and schedules over emotional connection

Unlike OCD, OCPD is more about rigid personality style than intrusive thoughts.

Rabbit represents how high-functioning individuals may still struggle with inflexibility and relational strain.

CONCLUSION

– Psychological Themes in Childhood Stories

- The film shows how internal struggles can be projected onto imagined companions and childhood memories.
- *Christopher Robin* gently teaches us that healing involves embracing all parts of ourselves—even the disordered, anxious, or scattered ones.
- Seeking professional help can be an option for mental illness

“Sometimes the smallest things take up the most room in your heart. “ – Winnie the Pooh

“You’re braver than you believe, stronger than you seem, and smarter than you think.” – Christopher Robin

“The things that make me different are the things that make me, me.” – Piglet
